PROFESSIONAL SUMMARY

Entry-level cloud and data professional with a B.Tech in Artificial Intelligence and Data Science. Skilled in Microsoft Excel, Power BI, SQL, and Python. Hands-on experience with Amazon Web Services (AWS) and PySpark through self-directed projects. Strong client communication, documentation, and report preparation skills. Seeking an entry-level Data Entry, Cloud Support, or Administration role.

WORK EXPERIENCE

Sales Executive | Royal Citadel, Dubai, UAE | 4 months

- Handled client calls and inquiries daily, identifying needs and guiding each client through the account opening process
- Explained technical topics such as trading platforms and market data in clear, non-technical language
- Prepared pitch decks, portfolio reports, and email and WhatsApp follow-ups, keeping client information accurate and consistent
- Resolved client questions on platform use and account opening in real time, similar to help-desk and client support work

Machine Learning Intern | Eduexpose, India | February 2025 - April 2025

- Built classification models reaching 91% accuracy using scikit-learn, cleaning and preprocessing 50,000+ records with Pandas and NumPy
- Deployed machine learning workflows with Streamlit and Flask connected to SQL databases for real-time data applications
- Improved model training efficiency by 25% through feature engineering, hyperparameter tuning, and pipeline optimization

SKILLS

- **Data Tools:** Microsoft Excel, Power BI, SQL, Python, Pandas, NumPy, Data Analysis, Data Cleaning, Reporting
- **Cloud:** Amazon Web Services (AWS), EC2, S3, RDS, Identity and Access Management (IAM), Virtual Private Cloud (VPC), Lambda, CloudWatch, Route 53, CloudFront, Glue, Athena, Auto Scaling, High Availability, Disaster Recovery
- **IT Support:** Linux, Windows, TCP/IP, Domain Name System (DNS), Dynamic Host Configuration Protocol (DHCP), Subnetting, Troubleshooting, Apache Web Server
- **DevOps and IoT:** Git, GitHub, Docker, Terraform (Basic), Arduino, IoT Sensor Integration
- **Admin and Communication:** Client Communication, Documentation, Report Preparation, Follow-Up, Stakeholder Management, Problem-Solving, Agile

TECHNICAL PROJECTS (SELF-DIRECTED)

Independent projects, not employment

AWS Data Lake Pipeline | AWS S3, PySpark, Glue, Athena, Boto3, IAM | January 2026 - February 2026

- Engineered a Bronze-Silver-Gold S3 data lake processing 10GB+ of raw data daily with automated PySpark ETL pipelines
- Cut Athena query costs by 30% by converting raw CSV files to partitioned Parquet
- Automated pipeline workflows with Boto3 and AWS Glue, reducing manual processing time by 80%
- Enforced data governance across all pipeline stages using role-based IAM policies

3-Tier E-Commerce Architecture on AWS | EC2, RDS MySQL, ALB, Route 53, CloudFront, Lambda | November 2025 - January 2026

- Deployed a scalable 3-tier architecture with EC2 Auto Scaling, RDS MySQL, and Application Load Balancer, achieving 99.9% uptime with CloudWatch dashboards and alarms
- Reduced MySQL query latency by about 40% through index optimization, connection pooling, and query restructuring
- Cut static asset load times by about 35% with Route 53 DNS routing and CloudFront CDN

- Built serverless backend APIs with Lambda and API Gateway, removing always-on compute costs
- Secured resources with IAM roles, security groups, and least-privilege access policies

Multi-Region Disaster Recovery on AWS | EC2, Route 53, VPC, IAM, Apache | November 2025 - January 2026

- Architected a multi-region disaster recovery setup with Route 53 health-check failover, achieving a recovery time under 5 minutes
- Configured Apache servers on EC2 instances across two AWS regions, eliminating single points of failure
- Executed failover simulations with a 100% success rate and documented recovery runbooks
- Restricted attack surface with IAM policies and strict VPC security group rules

ACADEMIC PROJECTS

AI-Based Grayscale Image Colorization Web Application | May 2025

- Developed a Python web application that automatically colorizes grayscale images using deep learning and computer vision
- Implemented image preprocessing and colorization workflows with OpenCV, NumPy, and a pretrained Caffe-based deep neural network
- Integrated a Flask web interface for image submission and visualization of colorized results
- Explored Generative Adversarial Network (GAN) colorization methods for realistic image reconstruction and enhancement

Technologies: Python, OpenCV, NumPy, Flask, Deep Learning, CNNs, Computer Vision, Caffe

IoT-Based Outdoor Air Quality Monitoring and Purification System | June 2024

- Developed an Arduino-based air quality monitoring and purification prototype using environmental sensors
- Integrated PM2.5 particulate sensing and BME280 temperature and humidity monitoring to collect environmental data
- Implemented threshold-based control logic that switches a purification fan on or off based on PM2.5 readings
- Programmed sensor data acquisition and serial monitoring in Arduino C/C++, and tested the circuit in Proteus simulation

Technologies: Arduino Uno, C/C++, IoT, PM2.5 Sensor, BME280, Environmental Monitoring, Proteus, Sensor Integration

EDUCATION

Bachelor of Technology (B.Tech) in Artificial Intelligence and Data Science | K. Ramakrishnan College of Technology, Tiruchirappalli, India | 2021 - 2025

CGPA: 7.31/10

Relevant Coursework: Cloud Computing, Computer Networks, Database Management Systems, Big Data Analytics, Machine Learning

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate (In Progress)
- Cisco Certified Network Associate (CCNA) (In Progress)
- Excel with AI Certification
- Masters in Coding: Data Analysis, Networking, Cloud Computing and Cyber Security | KaaShiv InfoTech, Chennai | February 2026
- SQL | Skillrack
- Ethical Hacking (Basic) | HackerRank
